**Vortex II Container & Harness**

The Vortex II sports some of the most unique design features in modern skydiving. These innovative qualities contribute in making it the most comfortable rig to own as well as one of the most affordable. In fact, it is so comfortable that you can hardly feel you're wearing it in freefall! The back pad and yoke are contoured to the shape of the body for extra comfort. The cut out in the back pad makes the harness fit snugly, and the splayed leg straps add extra comfort when under canopy. The harness is also custom made to fit your size and measurements.
